

# L3: Building, Testing and Debugging Scientific Software

---

P. de Oliveira Castro, M. Jam  
September 1, 2025

Master Calcul Haute Performance et Simulation - GLHPC | UVSQ

## Objectives

- Build systems: Advanced Makefiles, introduction to CMake for managing multi-file and multi-platform projects.
- Debugging: GDB, Valgrind for detecting memory errors and leaks.
- Software testing:
  - Principles: Unit testing, integration testing.
  - Test frameworks in C (e.g., Unity).
  - Importance of testing for regression prevention and validation.
- Code documentation: Doxygen.

## Dependency Management

- How to determine which files have changed?

Figure 1: makefile-dependencies

- dependencies: `main.o` depends on changes in `lib.h`

## Makefile

- A `Makefile` uses a declarative language to describe targets

## Why CMake?

- **Advantages of Makefiles:**
  - Simplicity and transparency.
  - No additional tools required.
  - Direct control over the build process.
- **Advantages of CMake:**
  - Cross-platform support (Linux, Windows, macOS).
  - Generates build files for multiple build systems (Make, Ninja, etc.).
  - Modular and target-based design.
  - Built-in support for testing, installation, and packaging.

## General Design of CMake

- **CMake as a Meta-Build System:**
  - Generates build files for different generators (e.g., Make, Ninja).
  - Abstracts platform-specific details.
- **Workflow:**
  1. Write `CMakeLists.txt` to define the project.
  2. Configure the project:

```
cmake -B build
```

3. Build the project:

```
cmake --build build
```

GDB: GNU Debugger

Valgrind: memory debugging and leak detection

Other tools: ASAN, UBSAN

# Software Testing

## Importance of Software Testing

- 1996: Ariane-5 self-destructed due to an unhandled floating-point exception, resulting in a \$500M loss.
- 1998: Mars Climate Orbiter lost due to navigation data expressed in imperial units, resulting in a \$327.6M loss.
- 1988-1994: FAA Advanced Automation System project abandoned due to management issues and overly ambitious specifications, resulting in a \$2.6B loss.
- 1985-1987: Therac-25 medical accelerator malfunctioned due to a thread concurrency issue, causing five deaths and numerous injuries.

## Technical Debt

- Course “Automated Software Testing,” Sébastien Bardin.
